APEX in Environment

APEX in Environment can help Airports identify their status, blind spots and gaps. The Program gives recommendations to build on current programs and infrastructure to assist Airports to achieve a higher environmental maturity level. The program can be customized to the size and structure of the Airport. The Review is conducted on-site by a team of industry experts that focus on best practices of key environmental areas.

What are the benefits of an APEX in Environment?

- **Draw** on best practices from industry experts

- **Increase** the level of compliance with applicable standards, recommended practices and national requirements

- **Develop** a risk management plan and mitigation strategies

- **Learn** from the experience of other operational environments

- **Establish** quality key performance indicators and select appropriate tools to measure environmental performance

aci.aero/APEX

Key Focus Areas

- Environmental Governance
- Noise Management
- Air Quality & GHG
- Water Quality
- Soil Quality
- Biodiversity & Habitat

- Energy Management
- Waste Management
- Environmental Emergency Management
- Construction Environmental Management

Reviews are tailored to meet the needs of the Host Airport in accordance with their risk environment and operational realities.

In 1 week process
4 EASY STEPS

1 Completion and submission of pre-review questionnaire to identify areas of emphasis

2 Assessment of operations by ACI APEX in Environment team

3 Presentation of observations and recommendations on-site

4 Receipt of a written draft report 30 days following the review

For more information, airport should contact their regional office or send an email to APEX@aci.aero
